

Enhanced Water Quality Monitoring and Modeling Program for the A.R.M. Loxahatchee National Wildlife Refuge Quarterly Update Report – July 2007

Prepared by:

Matt Harwell, A.R.M. Loxahatchee National Wildlife Refuge

With contributions from Donatto Surratt, and Mike Waldon

Overview

This update is a summary of activities since the previous status report of April 2007 on the implementation of the Refuge's Enhanced Water Quality Monitoring and Modeling Program. A project overview, and other detailed information about the program can be found at: http://sofia.usgs.gov/lox_monitor_model/. The primary objective of this overall program focuses on providing information for use in ecological management of the Refuge (Brandt et al. 2004; Harwell et al. 2005; USFWS 2007).

The Refuge's monitoring component of this program also addresses one of the Consent Decree Principals recommendations (17 December 2003):

B. Enhancing Monitoring of the Refuge

Design and implement an enhanced monitoring program to improve spatial and temporal understanding of factors related to phosphorus dynamics.

The Refuge's modeling component of this program also addresses several of the Consent Decree Principals recommendations (17 December 2003):

C. Modeling of the Refuge

- 1. Develop a water quality/hydraulic model for the Refuge with a phosphorus cycling component.*
- 2. Evaluate issues associated with phosphorus loads and transports within the L-40 and L-7 canals.*
- 3. Develop and track a simple phosphorus mass-balance model for the Refuge.*

Information Availability

Through collaboration with USGS, information from the Refuge's Enhanced Water Quality Monitoring and Modeling Program has been made available on the USGS' SOFIA web site at: http://sofia.usgs.gov/lox_monitor_model/.

Final data for monthly samples through May 2006 are publicly posted on DBHYDRO by the SFWMD at <http://www.sfwmd.gov/org/ema/dbhydro/index.html>. Data for June 2006-June 2007 are posted on the Technical Oversight Committee's web site at <http://www.sfwmd.gov/org/ema/toc/index.html>. This report includes information from samples collected through June 2007.

Presentations were made as part of a special session on water quality issues in the Everglades at the 2007 annual meeting of the North American Benthological Society held in June 2007 in Columbia, SC (see: <http://www.benthos.org/Meeting>).

Water Quality Data Analyses Update

Primary efforts from this quarter focused on preparing the Third Annual Report. This report focuses on extending the period of record captured in the Second Annual Report to December 2006.

Monitoring Update (April 2007 – June 2007)

Sampling of the enhanced water quality monitoring network (**Figure 1**) occurred at 6 stations in April 2007, 5 stations in May 2007, and 12 stations in June 2007 (**Table 1**).

Total phosphorus data available to date for October 2006 to June 2007 are presented in **Table 1**. Maps of stations where samples were collected for April 2007 through June 2007 are presented in **Figures 2-4**.

Conductivity sonde deployment information for October 2006 to June 2007 is presented in **Table 2**.

Modeling Update

Model development continues with intensive effort by the modeling team. The modeling team held their first model results workshop on June 18th in Delray Beach, where more than two dozen people across multiple agencies attended. The workshop covered the water budget and simple constituents modeling efforts, as well as some preliminary information on the complex hydrodynamic modeling. Information from this workshop is tentatively available at: <http://loxmodel.mwaldon.com/>. A second workshop is planned for August 2007.

Next Steps

The next steps for this program include exploring mechanisms to present information from the Annual Report – in particular the modeling efforts – to a larger audience, continuation of data collection and analysis, additional model development and implementation.

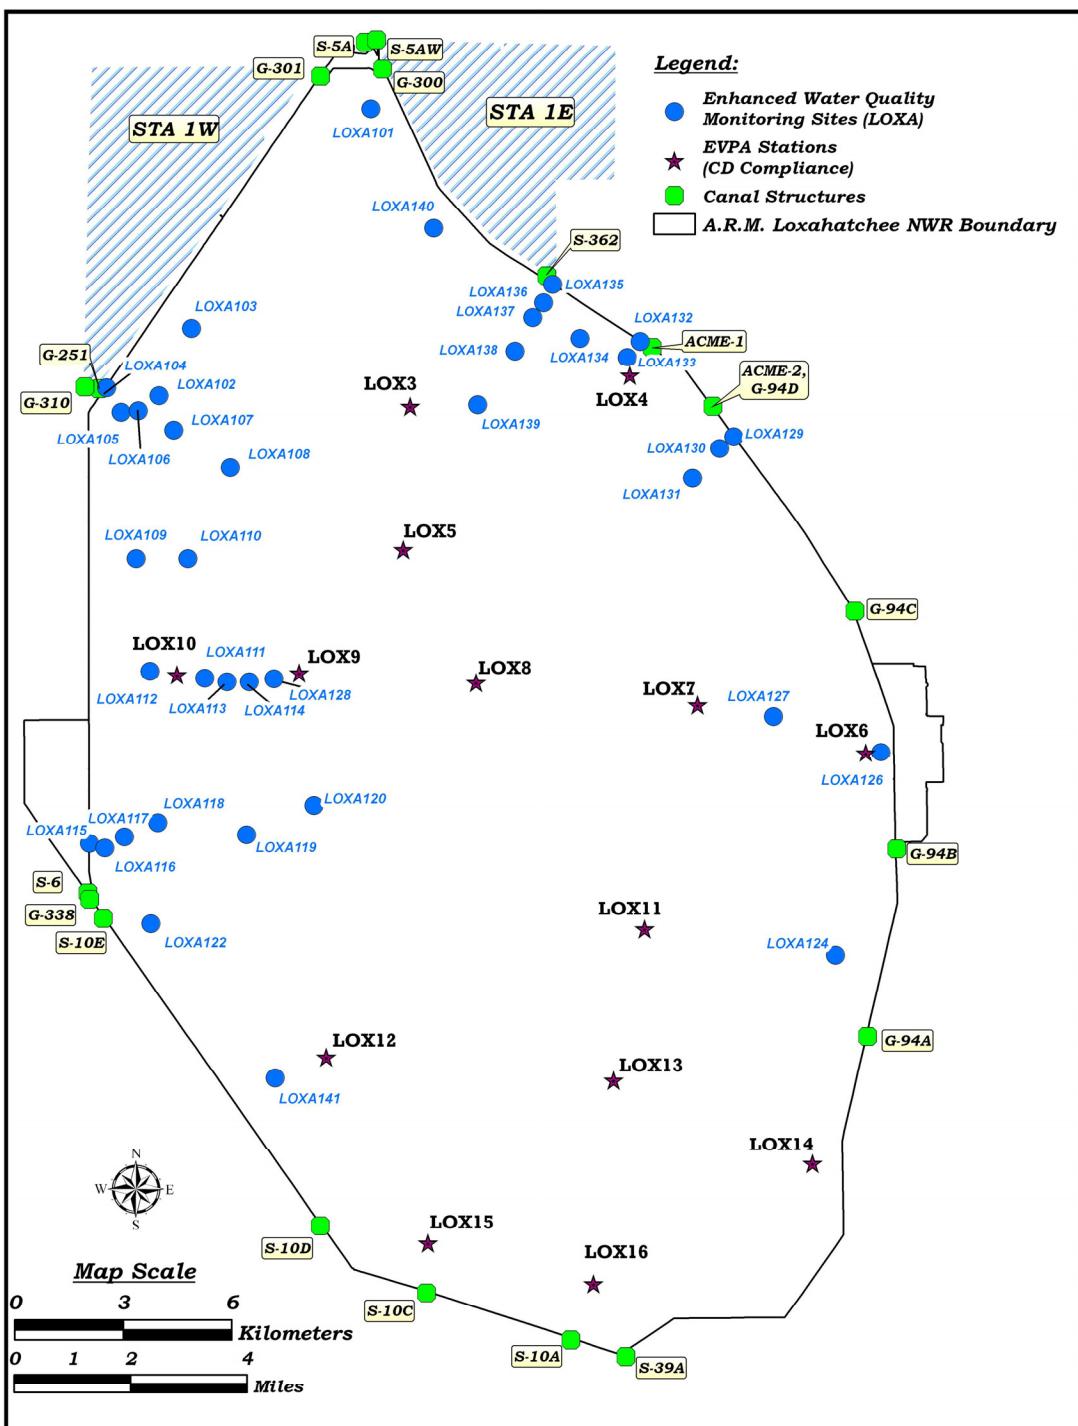

Figure 1. Location of Enhanced Water Quality Monitoring network stations (LOXA###), in relation to Consent Decree compliance stations (LOX##), for the A.R.M. Loxahatchee National Wildlife Refuge.

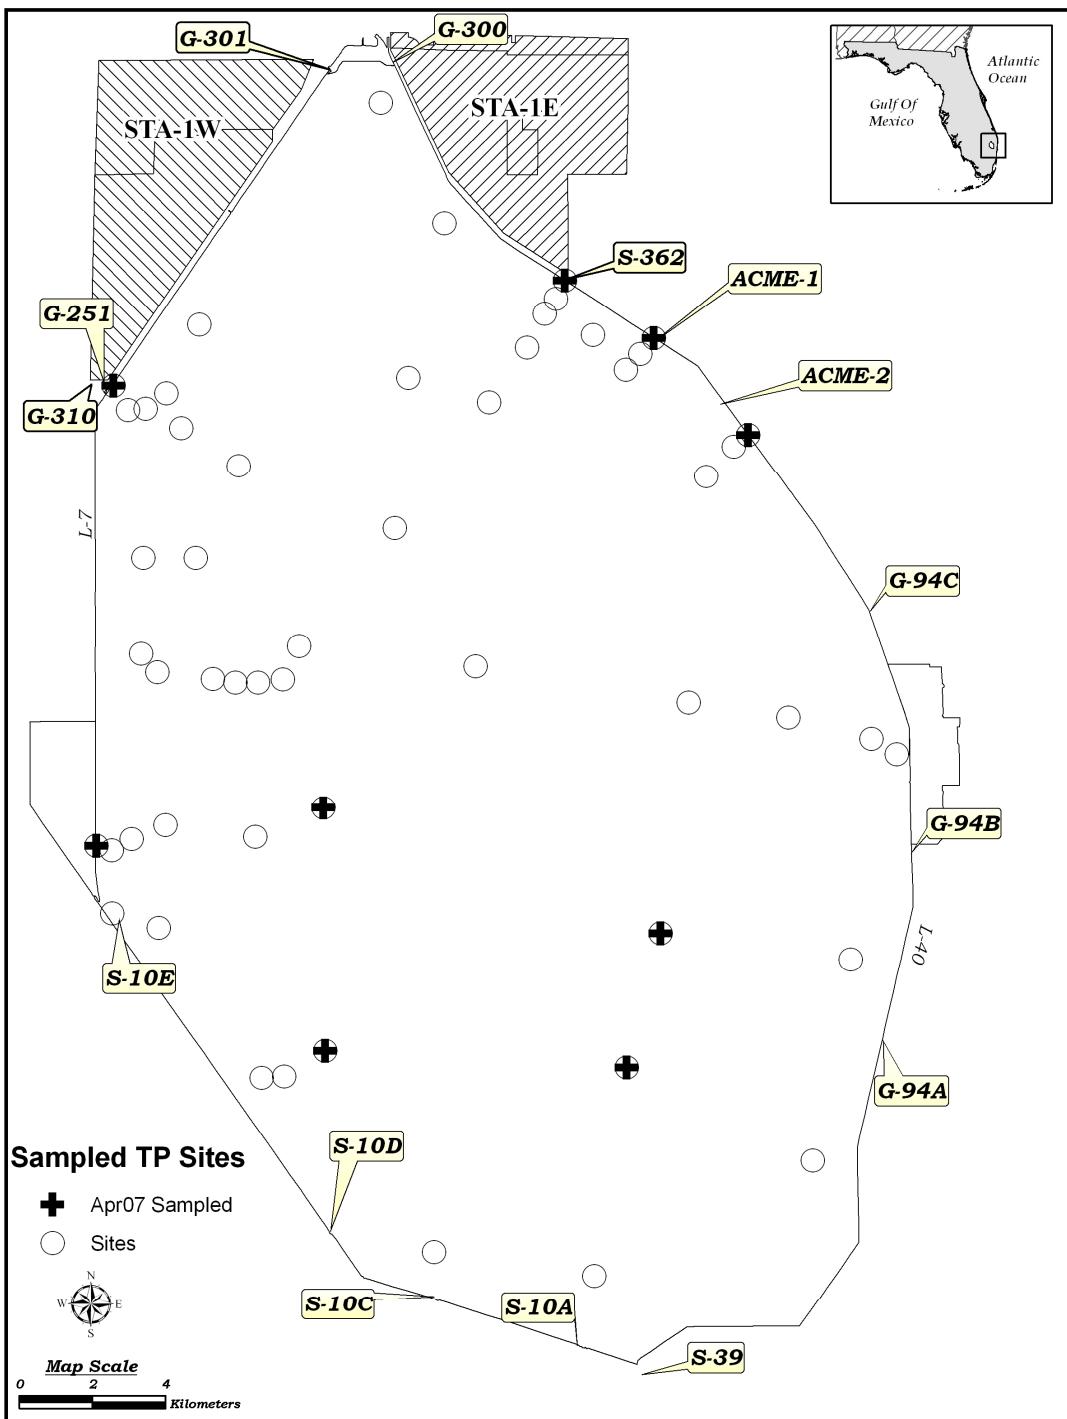

Figure 2. April 2007 map of total phosphorus sample collections from the Enhanced Water Quality Monitoring and the EVPA stations in the A.R.M. Loxahatchee National Wildlife Refuge. A primary reason that a station is not sampled is that it has less than 10 cm of clear water column representative of that area.

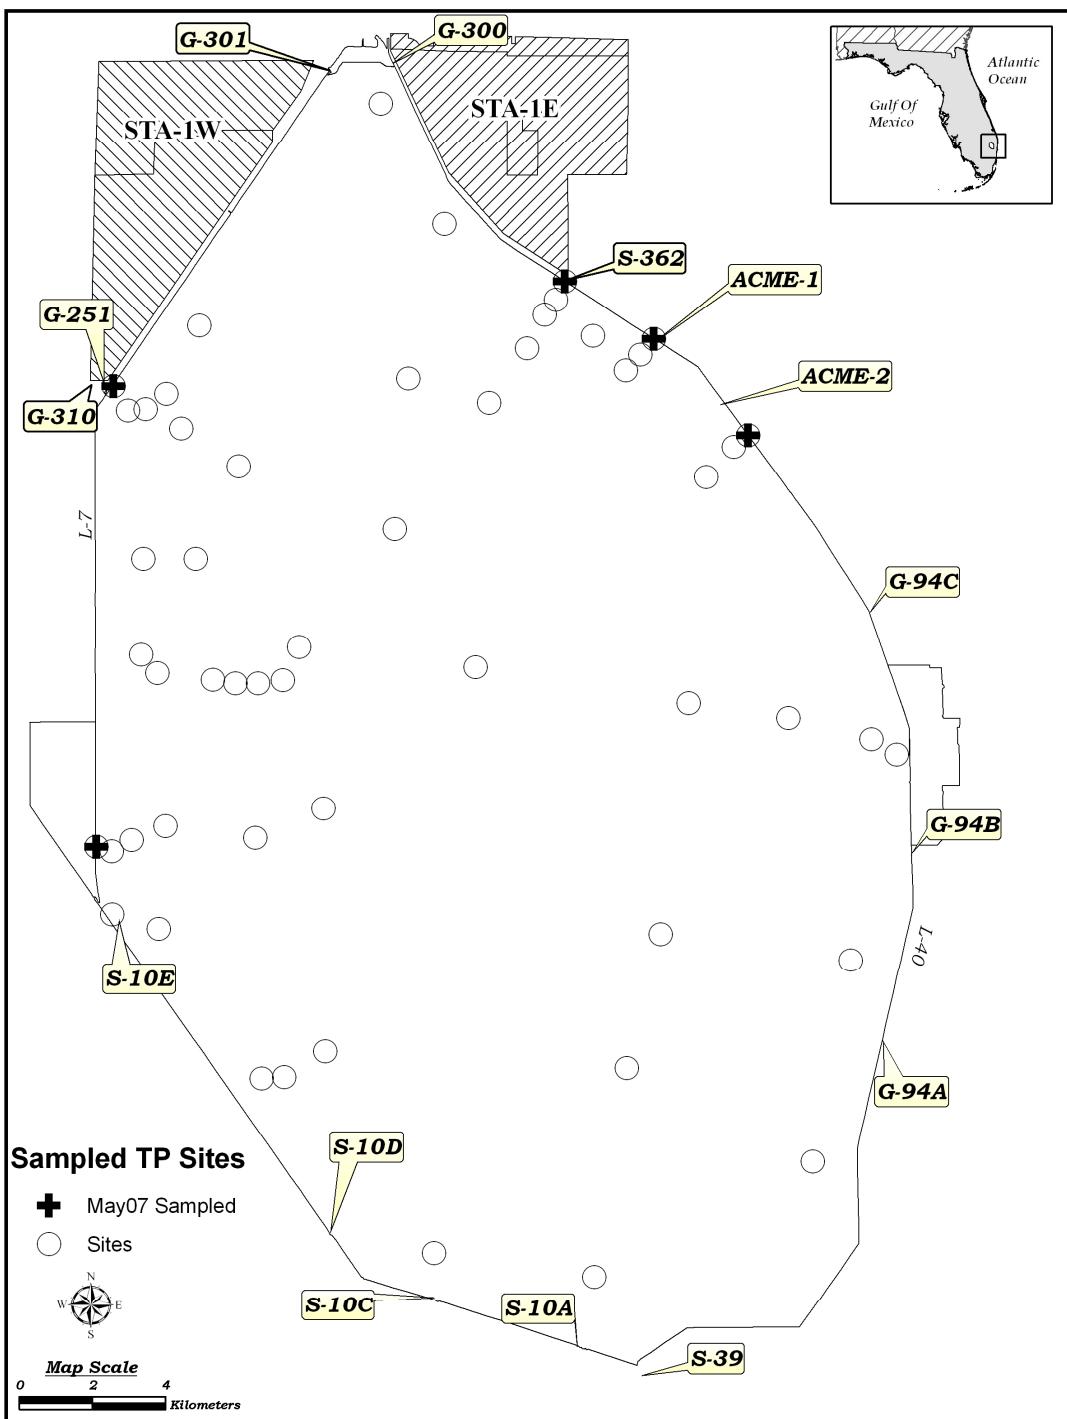

Figure 3. May 2007 map of total phosphorus sample collections from the Enhanced Water Quality Monitoring and the EVPA stations in the A.R.M. Loxahatchee National Wildlife Refuge. A primary reason that a station is not sampled is that it has less than 10 cm of clear water column representative of that area.

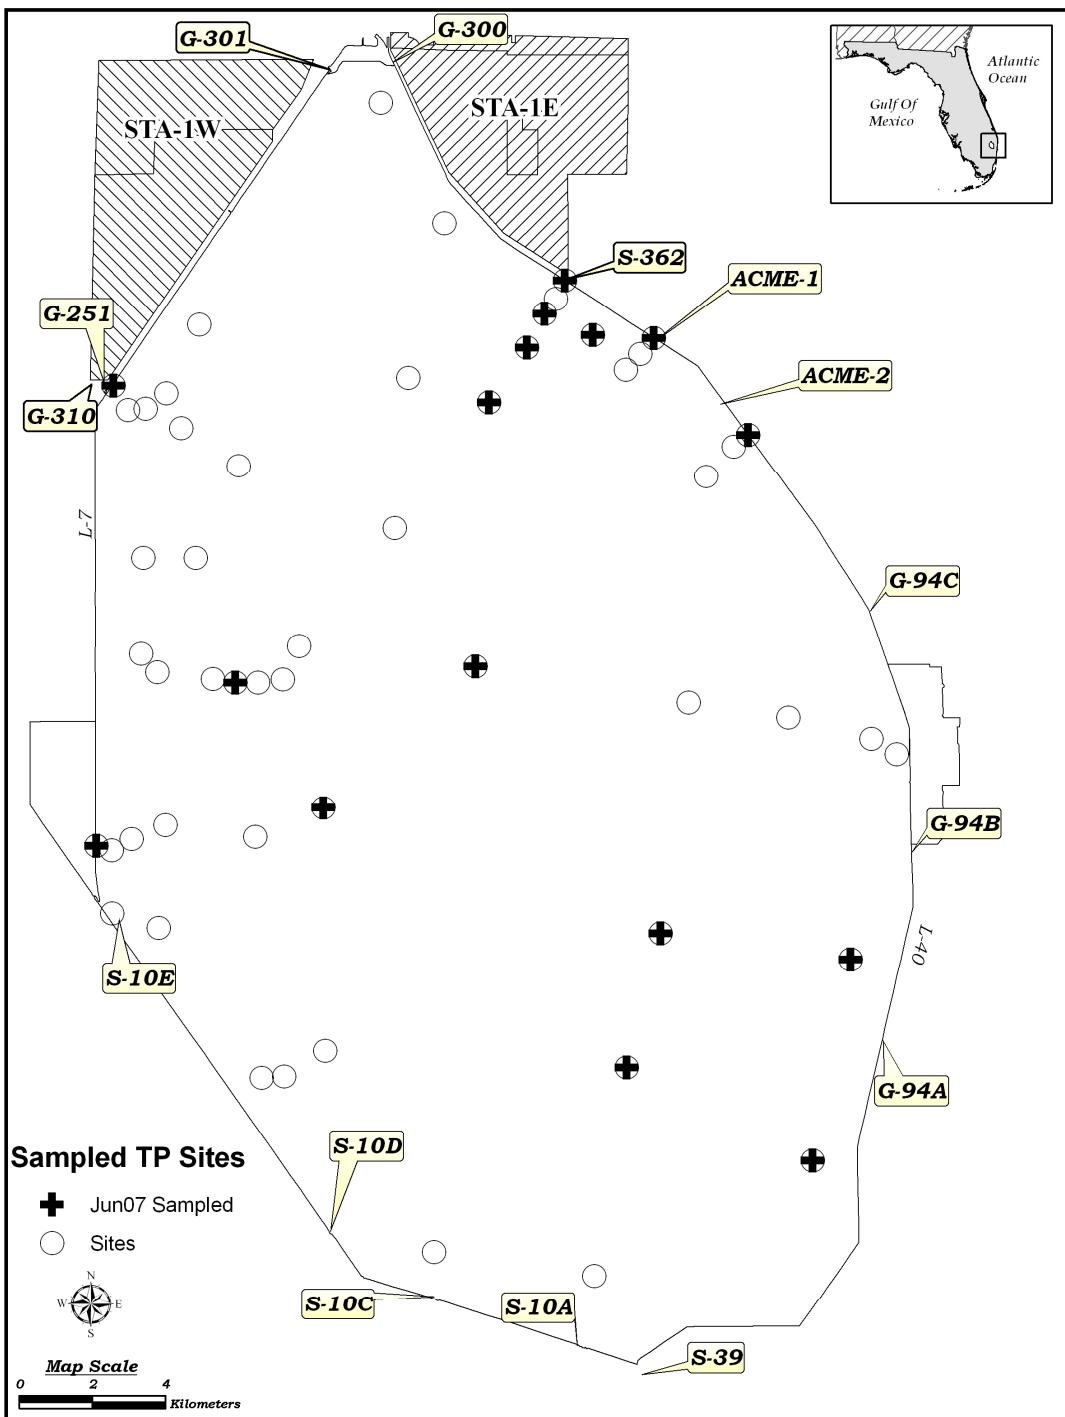

Figure 4. June 2007 map of total phosphorus sample collections from the Enhanced Water Quality Monitoring and the EVPA stations in the A.R.M. Loxahatchee National Wildlife Refuge. A primary reason that a station is not sampled is that it has less than 10 cm of clear water column representative of that area.
